Ignored questions APIs

Nov 9, 2026 · @Abd Elwahab Sewalam

GET /api/questions/ignored?lessonId=&category=

Who: registered user · guest (any signed-in account)

Brief

The questions this user ignored (with `delete-for-user`) in one lesson and category. It feeds an "Ignored questions" list on the lesson page, where each row has a restore button.

Fields

Query	Required	Meaning
lessonId	yes	The lesson's id, greater than 0
category	yes	One of the three categories, sent as the Arabic text: `معلومات إضافية` · `معلومات مهمة` · `أساسيات`

Valid cases

Some questions ignored: `GET /api/questions/ignored?lessonId=12&category=أساسيات`

```
{ "success": true, "data": [
  { "informationID": 431, "lessonID": 12, "displayOrder": 0,
    "informationCategory": "أساسيات", "title": "…",
    "infoCard": { "title": "…", "explanation": "…", "imageUrl": null,
"audioUrl": null, "videoUrl": null },
    "mcqCard": { "text": "…", "options": [ "…", "…" ], "correctAnswer": "…"
},
    "fibCard": null },
  … ], "error": null }
```

Nothing ignored there: the same call returns `"data": []`. This is a 200, not an error.

Bad cases

Send	Get	Show
No token	401 `unauthorized`	يرجى تسجيل الدخول مرة أخرى
`lessonId` missing or 0 or less	400 `invalid_input`, "lessonId must be a positive integer."	القيمة المدخلة غير صحيحة
`category` missing	400 `invalid_input`, "category is required."	القيمة المدخلة غير صحيحة
`category=Basics`, or any text that isn't one of the three	400 `invalid_category`	تصنيف السؤال غير صحيح

Lookups and dependencies

- `POST /api/questions/delete-for-user` is how a question gets into this list.
- `POST /api/questions/restore-for-user` (the next card) takes a question out of it.
- The `lessonId` and `category` are the same ones the lesson page already uses for `customized-by-category-and-lesson`.

Notes

- The rows have the same shape and order as the customized list. `isFinished` is never in this list. Ignored questions don't count in the repetition.
- A lesson with no such questions, or another user's lesson, just returns an empty list.
- Refetch after a restore, or drop the row when the restore answers `restored: true`.

The responses are example shapes. These endpoints haven't been run against the dev server yet.

POST /api/questions/restore-for-user

Who: registered user · guest (any signed-in account)

Brief

Brings back a question the user ignored. It shows up again in the customized list and in `session-questions`, and it counts again toward finishing the lesson's repetition. The restore button on each row of the ignored list calls it.

Fields

Body field	Required	Meaning
questionId	yes	The question's `informationID` from the ignored list, greater than 0

Valid cases

Restored: the question was ignored

```
POST /api/questions/restore-for-user
{ "questionId": 431 }

{ "success": true,
  "data": { "questionId": 431, "restored": true },
  "error": null, "message": "Question restored for the current user." }
```

Not ignored: the question is visible but wasn't ignored (for example, a second tap). This is still a 200.

```
{ "success": true,
  "data": { "questionId": 431, "restored": false },
  "error": null, "message": "Question was not ignored." }
```

Bad cases

Send	Get	Show
No token	401 `unauthorized`	يرجى تسجيل الدخول مرة أخرى
`{ "questionId": 0 }`, or no `questionId`	400 `invalid_input`, "questionId must be a positive integer."	القيمة المدخلة غير صحيحة

Send	Get	Show
`{ "questionId": 999999 }`, or another user's own question	404 `not_found`, "Question not found."	العنصر المطلوب غير موجود

Lookups and dependencies

- `GET /api/questions/ignored` (the card above) gives the `questionId`, as `informationID`.
- `POST /api/questions/delete-for-user` is the opposite: it ignores the question again.

Notes

- On `restored: true`, remove the row from the ignored list and refetch the customized list, so the question appears again with its own `isFinished` value.
- Treat `restored: false` like success: just remove the row.
- Restoring in the middle of a repetition adds one more question the lesson needs before `/end` counts it as complete. If it matters on the screen, a short note can say so: سيُضاف هذا السؤال إلى المراجعة الحالية
